

Sorting a list of numbers (Array)

```
class NumberSorting
{
    public static void main(String args[])
    {
        int number[]={55,40,80,65,71};
        int n=number.length;
        System.out.print("Given list:");
        for(int i=0;i<n;i++)
        {
            System.out.print(" "+number[i]);
        }
        System.out.println("\n");
        for(int i=0;i<n;i++)
        {
            for(int j=i+1;j<n;j++)
            {
                if(number[i]<number[j])
                {
                    int temp=number[i];
                    number[i]=number[j];
                    number[j]=temp;
                }
            }
        }
    }
}
```

```
 }

System.out.print("Sorted list: ");

for(int i=0;i<n;i++)

{

    System.out.print(" " + number[i]);

}

System.out.print(" ");

}

}
```

The screenshot shows a Windows Command Prompt window titled 'C:\Windows\system32\cmd.exe'. The command line shows the user navigating to the directory 'E:\Java' and running the command 'javac NumberSorting.java'. After compilation, the user runs the program with the command 'java NumberSorting'. The output displays the original list of numbers: 'Given list: 55 40 80 65 71'. Below this, the sorted list is printed: 'Sorted list: 80 71 65 55 40'. The prompt 'E:\Java>' is visible at the end of the session.

```
E:\Java>javac NumberSorting.java

E:\Java>java NumberSorting
Given list: 55 40 80 65 71

Sorted list: 80 71 65 55 40
E:\Java>
```
